Table of contents

Contents

Preface
Glossary of Symbols
Table of Conversions for S.L Units

Chapter 1	*Basic Concepts*	1
1.1	Introduction	1
1.2	Sedimentation and Sieving in Determination of Particle Sizes	2
1.3	Index Tests	4
1.4	Soil Classification	5
1.5	Water Content and Density of Saturated Soil Specimen	7
1.6	The Effective Stress Concept	8
1.7	Some Effects that are 'Mathematical' rather than 'Physical'	10
1.8	The Critical State Concept	12
1.9	Summary	14
Chapter 2	*Stresses, Strains, Elasticity, and Plasticity*	16
2.1	Introduction	16
2.2	Stress	16
2.3	Stress-increment	18
2.4	Strain-increment	19
2.5	Scalars, Vectors, and Tensors	21
2.6	Spherical and Deviatoric Tensors	22
2.7	Two Elastic Constants for an Isotropic Continuum	23
2.8	Principal Stress Space	25
2.9	Two Alternative Yield Functions	28
2.10	The Plastic Potential Function and the Normality Condition	29
2.11	Isotropic Hardening and the Stability Criterion	30
2.12	Summary	32
Chapter 3	*Seepage*	34
3.1	Excess Pore-pressure	34
3.2	Hydraulic Gradient	35
3.3	Darcy's Law	35
3.4	Three-dimensional Seepage	37
3.5	Two-dimensional Seepage	38
3.6	Seepage Under a Long Sheet Pile Wall: an Extended Example	39
3.7	Approximate Mathematical Solution for the Sheet Pile Wall	40
3.8	Control of Seepage	44
Chapter 4	*One-dimensional Consolidation*	46
4.1	Spring Analogy	46
4.2	Equilibrium States	49
4.3	Rate of Settlement	50
4.4	Approximate Solution for Consolidometer	52
4.5	Exact Solution for Consolidometer	55
4.6	The Consolidation Problem	57

Chapter 5 *Granta-gravel* 61
5.1 Introduction 61
5.2 A Simple Axial-test System 62
5.3 Probing 64
5.4 Stability and Instability 66
5.5 Stress, Stress-increment, and Strain-increment 68
5.6 Power 70
5.7 Power in Granta-gravel 71
5.8 Responses to Probes which cause Yield 72
5.9 Critical States 73
5.10 Yielding of Granta-gravel 74
5.11 Family of Yield Curves 76
5.12 Hardening and Softening 78
5.13 Comparison with Real Granular Materials 81
5.14 Taylor's Results on Ottawa Sand 85
5.15 Undrained Tests 87
5.16 Summary 91

Chapter *6 Cam-clay and the Critical State Concept* 93
6.1 Introduction 93
6.2 Power in Cam-clay 95
6.3 Plastic Volume Change 96
6.4 Critical States and Yielding of Cam-clay 97
6.5 Yield Curves and Stable-state Boundary Surface 98
6.6 Compression of Cam-clay 100
6.7 Undrained Tests on Cam-clay 102
6.8 The Critical State Model 104
6.9 Plastic Compressibility and the Index Tests 105
6.10 The Unconfined Compression Strength 111
6.11 Summary 114

Chapter 7 *Interpretation of Data from Axial Tests on Saturated Clays* 116
7.1 One Real Axial-test Apparatus 116
7.2 Test Procedure 118
7.3 Data Processing and Presentation 119
7.4 Interpretation of Data on the Plots of v versus ln p 120
7.5 Applied Loading Planes 123
7.6 Interpretation of Test Data in $(p, v,$ q) Space 125
7.7 Interpretation of Shear Strain Data 127
7.8 Interpretation of Data of $\dot{\varepsilon}$ and Derivation of Cam-clay Constants 130
7.9 Rendulic's Generalized Principle of Effective Stress 135
7.10 Interpretation of Pore-pressure Changes 137
7.11 Summary 142

Chapter 8 *Coulomb's Failure Equation and the Choice of Strength Parameters* 144
8.1 Coulomb's Failure Equation 144
8.2 Hvorslev's Experiments on the Strength of Clay at Failure 145
8.3 Principal Stress Ratio in Soil About to Fail 149
8.4 Data of States of Failure 152
8.5 A Failure Mechanism and the Residual Strength on Sliding Surfaces 154
8.6 Design Calculations 158
8.7 An Example of an Immediate Problem of Limiting Equilibrium 160
8.8 An Example of the Long-term Problem of Limiting Equilibrium 161
8.9 Summary 163

Chapter *9 Two-dimensional Fields of Limiting Stress* 165
9.1 Coulomb's Analysis of Active Pressure using a Plane Surface of Slip 165
9.2 Coulomb's Analysis of Passive Pressure 167
9.3 Coulomb's Friction Circle and its Development in Gothenberg 169
9.4 Stability due to Cohesion Alone 172
9.5 Discontinuity Conditions in a Limiting-stress Field 174
9.6 Discontinuous Limiting-stress Field Solutions to the Bearing Capacity Problem 180
9.7 Upper and Lower Bounds to a Plastic Collapse Load 186
9.8 Lateral Pressure of Horizontal Strata with Self Weight ($\gamma>0$, $\rho>0$) 188
9.9 The Basic Equations and their Characteristics for a Purely Cohesive Material 191
910 The General Numerical Solution 195
9.11 Sokolovski's Shapes for Limiting Slope of a Cohesive Soil 197
9.12 Summary 199

Chapter 10 *Conclusion* 201
10.1 Scope 201
10.2 Granta-gravel Reviewed 201
10.3 Test Equipment 204
10.4 Soil Deformation and Flow 204

Appendix A 206
Appendix B 209
Appendix C 216
